Applicants' arguments; filed 11/19/01, 6/14/02, and 10/10/02; have been fully considered but they are not deemed to be persuasive. Rejections and/or objections not reiterated from previous office actions are hereby withdrawn. The following rejections and/or objections are either reiterated or newly applied. They constitute the complete set presently being applied to the instant application.

Claim 45 is rejected under 35 U.S.C. § 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Factors to be considered in determining whether a disclosure would require undue experimentation have been summarized in Ex parte Forman, 230 USPQ 546 (BPAI 1986) and reiterated by the Court of Appeals in In re Wands, 8 USPQ2d 1400 at 1404 (CAFC 1988). The factors to be considered in determining whether undue experimentation is required include: (1) the quantity of experimentation necessary, (2) the amount or direction presented, (3) the presence or absence of working examples, (4) the nature of the invention, (5) the state of the prior art, (6) the relative skill of those in the art, (7) the predictability or unpredictability of the art, and (8) the breadth of the claims. The Board also stated that although the level of skill in

molecular biology is high, the results of experiments in genetic engineering are unpredictable. While all of these factors are considered, a sufficient amount for a *prima facie* case are discussed below.

The practice of the "Levenberg-Marquandt method" in claim 45 has not been set forth in the instant specification. Without specific guidance for its performance, the method is guesswork and clearly undue experimentation. Applicants allege that the reference cited in the specification on page 46, lines 11-28, documents the well known procedure of the Levenberg-Marquandt method". In response this method performance is noted as clearly a claim limitation in instant claim 45 and thus its performance is essential subject matter for the practice of claim 45. Also, in response the incorporation by reference of essential subject matter by citing a printed publication is not enabling as noted in the following paragraph. Applicants also allege that this method is well known but without supplying any factual support for this being a well known method. This argument is therefore an allegation without factual support and thus non-persuasive. It is noted that a method which is well known seemingly should be easily documented as such by applicants supplying supporting documentation. This rejection is therefore maintained from the previous office action, mailed 7/18/01.

The incorporation of essential material by reference to a

foreign application or foreign patent or to a publication inserted in the specification is improper. Applicant is required to amend the disclosure to include the material incorporated by reference. The amendment must be accompanied by an affidavit or declaration executed by the applicant, or applicant's attorney or agent, stating that the amendatory material consists of the same material incorporated by reference in the referencing application. *In re Hawkins*, 486 F.2d 569, 179 USPQ 157; *In re Hawkins*, 486 F.2d 579, 179 USPQ 163; *In re Hawkins*, 486 F.2d 577, 179 USPQ 167.

Claim 41-45 and 48-88 are rejected, as discussed below, under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

This rejection is maintained and reiterated from the previous office action, mailed 7/18/01, and as necessitated by newly added claim 88. Applicants argue that the determination of the "best scaling transformations" is set forth as scaling to minimize the difference between the drug response and the model drug response and is performed for each and every biological pathway being analyzed. In response it remains vague and indefinite as to what this "best" scaling determination corresponds to. That is, by separately minimizing said difference, the response profiles are confusingly not relating drug responses per se but rather relating the best fit to a target model which may or may not be accurate. This seems philosophically like shooting a number of times at the side of a barn and then drawing a target on the barn that most closely

encompasses the hits. This confusingly thus seems to bias the data via the desired model without maintaining the actual drug response profiles as they correspond to the biological drug responses. Clarification via clearer claim wording is requested.

No claim is allowed.

Applicants' amendment necessitated the new grounds of rejection. Accordingly, **THIS ACTION IS MADE FINAL**. See M.P.E.P. § 706.07(a). Applicants are reminded of the extension of time policy as set forth in 37 C.F.R. § 1.136(a).

A SHORTENED STATUTORY PERIOD FOR RESPONSE TO THIS FINAL ACTION IS SET TO EXPIRE THREE MONTHS FROM THE DATE OF THIS ACTION. IN THE EVENT A FIRST RESPONSE IS FILED WITHIN TWO MONTHS OF THE MAILING DATE OF THIS FINAL ACTION AND THE ADVISORY ACTION IS NOT MAILED UNTIL AFTER THE END OF THE THREE-MONTH SHORTENED STATUTORY PERIOD, THEN THE SHORTENED STATUTORY PERIOD WILL EXPIRE ON THE DATE THE ADVISORY ACTION IS MAILED, AND ANY EXTENSION FEE PURSUANT TO 37 C.F.R. § 1.136(a) WILL BE CALCULATED FROM THE MAILING DATE OF THE ADVISORY ACTION. IN NO EVENT WILL THE STATUTORY PERIOD FOR RESPONSE EXPIRE LATER THAN SIX MONTHS FROM THE DATE OF THIS FINAL ACTION.
